

Construction And Testing Of An Inexpensive PAR Sensor

by Peter Fielder ; P. G. Comeau ; British Columbia

Abstract. We describe a low—cost sensor for measuring light intensity on the streambed that is simple and quick
multaneously measure PAR at up to 32 points Construction. The sensor .. 0.97, likelihood ratio test) and the
random-effects. Design and Construction of an Inexpensive Homemade Plant . Construction and Testing of an

British Columbia, Ministry of Forests Research Program, Jan EOL Annual Report 2006: Developing New
Instrumentation Typical construction of an expensive PAR sensor, such as Li-Cors. Although the meter tested here
is the FieldScout Light Meter, the sensors are (the Li-Cor setup costing over \$3,000) to relatively inexpensive
(\$300-\$400 or so) units.
